A Solution-focused, Data-driven, and People-oriented Professional

Dedicated to Improving People Experience

May 25, 2026

Hiring Manager

Sandvik Inc

Alachua, FL

HR and training work isn't just about managing processes—from my experience, it's about building the operational foundation that makes people development systematic, measurable, and actually trusted by the organization it serves. With a background in HR, Organizational Development, and Program Management, I have helped organizations combine HR operations rigor with needs-based training design—driving a 78% program enrollment rate across 15+ launches and reducing onboarding ramp-up time by 75%. I look forward to bringing my HR operational expertise, training facilitation skills, and data-driven program management to Sandvik Inc as an HR Specialist / Training and Development.

At InGenius Prep, I've been the person responsible for turning a learning gap into a functional training program. That means conducting needs assessments with 25+ global stakeholders, building the guides and workflows for 70+ staff that reduced onboarding time by 75%, and facilitating webinars for 600+ participants. What doesn't show up in those numbers is the operational infrastructure: maintaining the training calendar, coordinating with 8+ vendors, tracking effectiveness through feedback data, and iterating continuously.

My HR foundation comes from Vestas Wind Systems, where I partnered with the HRBP team on everything from piloting Inclusive Leadership workshops (later scaled to 23 global locations) to supporting onboarding process design across three countries. I also have user-level SAP experience for standard HRIS tasks, which I understand is Sandvik's system environment.

As an analytical organizer with a growth mindset, Sandvik's presence across industrial markets and the operational rigor that comes with that context are both draws. I'm open to relocating to Alachua for this role. Thank you for considering my application—I look forward to discussing how I can best contribute to Sandvik!

Sincerely,

Jamie (Yi-Chieh) Cheng
