Dear ElevenLabs Hiring Team,

Talent Operations isn't just about scheduling interviews—from my experience, it's about building the processes, automations, and dashboards that make hiring run like a well-oiled machine and let recruiters and hiring managers move fast without friction. With a background spanning program operations, recruiting, and organizational development, I'm excited to bring that process-driven, data-first mindset to ElevenLabs' Talent team.

At **InGenius Prep**, I **design best-in-class processes and SOPs** and build **workflow automations using AI tools**—work that reduced onboarding time by 75%. I manage the end-to-end lifecycle of 20+ programs and 10+ vendors at once, keeping many moving parts trustworthy and clean, and I build the reports and metrics that surface bottlenecks and point to where the system can be optimized. Juggling complexity while keeping data reliable is genuinely my comfort zone.

Earlier, at **Kronos Research**, I became fluent in the **recruiting workflows themselves**—scheduling, coordination, and stakeholder management across the full hiring funnel—and grew applications by 566% in two months through personalized candidate outreach. I know what the day-to-day of unblocking hiring managers actually feels like.

At **NextGen Healthcare**, I helped implement a **data strategy**, analyzing 2,000+ employee experiences and tracking the metrics that turned messy feedback into evidence-based decisions. That analytical discipline is how I'd build insightful reports and keep Talent decisions data-driven at ElevenLabs.

My approach is grounded in my **MS in Applied Organizational Psychology (USC)**: I diagnose with data, collaborate cross-functionally on solutions, and track metrics to ensure real progress. I'm also genuinely excited to identify and adopt cutting-edge Talent tooling—including Ashby—and to vibe-code automations where they save the team time. As an **analytical organizer with a growth mindset**, ElevenLabs' AI-first, high-velocity culture and the chance to power the hiring engine through hyperscale are real draws. I'd love to help build it.

Sincerely,

Jamie Cheng

Jamie (Yi-Chieh) Cheng
