Dear OpenAI Hiring Team,

Enablement for a fast-moving technical team isn't just about onboarding decks—from my experience, it's about building systems that compound: reusable knowledge, playbooks, and AI-native workflows that let a small team achieve outsized impact instead of growing headcount linearly. With a background spanning program management, enablement, and organizational development, I'm excited to bring that systems mindset to OpenAI's Forward Deployed Engineering team as your Onboarding & Enablement Program Manager.

At **InGenius Prep**, I build the **enablement infrastructure**—onboarding pathways, playbooks, and knowledge assets—that ramps new team members, work that reduced ramp time by 75%. I deliberately **codify patterns and lessons into reusable resources** and lean on **AI tools and automation** so the system gets stronger each cycle rather than depending on one-off heroics. I operate the core cadence behind 20+ programs across Marketing, Tech, and Sales, and I measure effectiveness through adoption signals and feedback loops—because rollout is the start, not the finish line.

At **NextGen Healthcare**, I analyzed **2,000+ employee experiences**, translating adoption and feedback signals into reports that shaped C-suite decisions, and led a manager-effectiveness initiative that turned scattered feedback into structured guidance and more consistent execution. That work is the analytical backbone of how I'd measure ramp speed and time-to-first-deployment at FDE.

At **Vestas Wind Systems**, I optimized onboarding across 3 global locations and piloted a leadership program that scaled across multiple teams to 23 locations—proof I can design enablement that balances shared standards with role-specific needs across closely related functions.

My approach is grounded in my **MS in Applied Organizational Psychology (USC)**: I diagnose with data, collaborate across stakeholders on solutions, and track metrics to ensure real progress. As an **analytical organizer with a growth mindset**, OpenAI's mission and the chance to build an AI-first enablement function that scales through better systems rather than linear headcount are exactly the problem I want to work on. I'd love to bring this methodology to FDE.

Sincerely,

Jamie Cheng

Jamie (Yi-Chieh) Cheng
