Dear Abridge Hiring Team,

Great training isn't just about producing content—from my experience, it's about treating learning as a system: diagnosing where users actually struggle, designing programs that fit their real workflow, and measuring whether behavior changes. With a background spanning program management, L&D, and organizational development, I'm excited to bring that evidence-based approach to Abridge as your Program Manager for Clinician Training & LMS.

At **InGenius Prep**, I own the end-to-end training machine: I **design and maintain curriculum across live, virtual, and self-serve formats** for 20+ programs and **run a recurring update cadence**, and I **administer our learning systems and documentation** for 70+ staff—work that cut onboarding time by 75%. I coordinate across Marketing, Tech, and Sales teams so every release has a corresponding training decision and nothing slips—which is exactly the connective-tissue role you describe between product releases and the end-user training experience.

My instinct to build with the user, not for them, was hard-won. I once launched a new program with all the docs in a library and assumed adoption would follow—it didn't. So I went back, interviewed the users, found the real issue was friction rather than resistance, and rebuilt it as a one-pager people actually used. That lesson—"assumption is the most expensive thing in L&D"—shapes how I'd keep clinician training current, polished, and genuinely adopted. At **Vestas**, I designed and piloted an Inclusive Leadership workshop that scaled to 23 global locations, so I know how to take a program from one room to many.

My approach is grounded in my **MS in Applied Organizational Psychology (USC)**, which trained me to treat training as research: I diagnose with data where learners struggle, partner with SMEs who own the content while I own the pedagogy, and measure behavior—not just completion—so the model keeps improving. As an **analytical organizer with a growth mindset**, Abridge's mission to power deeper understanding in healthcare—and the chance to make sure every clinician can trust and adopt your AI—are both genuine draws. I'd love to own that training experience with you.

Sincerely,

Jamie Cheng
