Dear Carnegie Mellon University Hiring Team,

Student involvement work is not just about coordinating tasks-from my experience, it is about understanding needs through data, building trust across stakeholders, and refining programs so people can learn, belong, and move forward. With a background in HR, Organizational Development, and Program Management, I look forward to bringing my strengths in **student involvement, event coordination, and community-building programs** to Carnegie Mellon University as a Coordinator of Student Involvement and Traditions. CMU's student involvement role fits the part of my background focused on building belonging, clarifying processes, and helping groups work better together.

At Vestas, I enhanced operational efficiency by identifying process gaps, streamlining workflows, and facilitating stakeholder communication across HR and business teams. I clarified ambiguous job responsibilities and standardized global onboarding processes, improving both efficiency and the talent experience. Overseeing the integration of an acquired company during an M&A project further demonstrated my ability to manage **cross-functional projects**, align stakeholders, and keep people-centered details visible during change.

At NextGen Healthcare, I enhanced my strategic planning, data analysis, and advisory skills by translating employee feedback into actionable insights. I initiated a manager effectiveness project that transformed survey data into practical recommendations and identified manager training as a key driver of engagement. This work enabled leaders to prioritize organizational needs and develop targeted L&D strategies through **data-driven decision-making**.

In my current role at InGenius Prep, I conduct needs assessments with 25+ global stakeholders, manage 20+ programs and 10+ vendors, and create guides and workflows that help 70+ cross-functional staff understand program operations. Through live training webinars for 600+ participants and continuous feedback analysis, I have learned to build programs that are structured, clear, and responsive to real user needs.

My master's training in Applied Organizational Psychology shapes how I approach this work: I collect and analyze data to diagnose problems, collaborate with people closest to the work to design cross-functional solutions, and use key metrics to track whether those solutions are making meaningful improvement. As an analytical organizer with a growth mindset, I would welcome the chance to contribute to CMU's student involvement and campus traditions work.

Sincerely,

Jamie Cheng
