Dear Vercel Hiring Team,

Being a strong HR Business Partner to engineering and product teams means more than supporting a client group—it means **reading the data to see where an org is struggling, partnering with leaders to act on it, and checking whether it worked**. That's how I approach the work, and it's why this role drew me in: the chance to help EPD organizations scale, navigate change, and build high-performing teams at a company defining how the web gets built. I'll be candid that the posting asks for more HRBP years than I have—I'm earlier in my career, with a master's in Applied Organizational Psychology and roughly three years across HR, OD, and People work—but partnering with leaders on org design, talent, and change is exactly the work I'm drawn to and have done.

At **Vestas Wind Systems**, I worked directly as an **HR Business Partner Assistant**, supporting HR solutions across **employee relations, headcount, and succession planning** while partnering with leaders on their business priorities. I helped direct a **Mergers & Acquisitions project** as organizational change, **piloted an Inclusive Leadership workshop** that scaled from 12 senior leaders to 23 global locations, and optimized onboarding across three sites through process analysis—the kind of org-scaling and change partnering this role centers on.

I pair that with a consultant's habit of leading with data. At **NextGen Healthcare**, I analyzed **2,000+ employee experiences** to identify trends and guide C-suite decisions on engagement and satisfaction. And at **Organization Development Network (ODN) Oregon**, I **facilitate CEO and HR discovery interviews** to diagnose drivers, then help turn the analysis into executive-ready insights—on one engagement, surfacing **\$362K in leave costs** that drove policy redesigns. Using quantitative and qualitative data to diagnose challenges and influence decisions is core to how I work.

This is how I operate, grounded in my organizational-psychology training (**MS, USC**): I use **data** to understand where people and processes struggle, **stakeholder partnership**—including with Recruiting, People Ops, and L&D—to design solutions that fit, and **continued measurement** to make sure they hold as teams grow. I'm genuinely excited by Vercel's pace and the chance to support the builders behind Next.js and v0, and I'd welcome the conversation.

Warmly,

Jamie Cheng

Jamie (Yi-Chieh) Cheng
