Dear Coinbase People Success Team,

Learning and development isn't just about delivering content—from my experience, it's a continuous cycle of diagnosing real capability gaps, designing interventions that change behavior, and using data to decide what scales, iterates, or gets cut. That belief is exactly why this role drew me in, and it's the lens I bring as an Organizational Development and Program Management professional with a master's in Applied Organizational Psychology to the manager- and AI-enablement work on your People Success team.

At **Vestas Wind Systems**, I learned that behavior change rarely happens through awareness alone. In an office of 22 nationalities, I diagnosed cross-cultural friction, found an internal champion, and partnered with a DEI specialist to **design and pilot an Inclusive Leadership workshop for 12 senior leaders**—then reinforced it with follow-up sessions so the shift stuck. The program **scaled to 23 global locations**, which taught me how to build enablement that travels beyond a single room.

At **NextGen Healthcare**, I worked the measurement side of the same problem. I **analyzed 2,000+ employee-experience responses** to pinpoint what actually moved engagement, concluded that **manager effectiveness was the strongest driver**, and translated that into a report the C-suite used to reshape leadership-development priorities. It's the kind of "let the data tell us where to invest" approach this role asks for.

In my current role as **Program Enablement Manager at InGenius Prep**, I run that full cycle at program scale. I **conduct needs assessments with 25+ stakeholders** to design new learning programs, **facilitate training for 600+ participants** across self-service and live virtual formats, and partner across Marketing, Tech, and Sales to refine delivery—**cutting onboarding time by 75%** through better documentation and communication. I'll be candid that I'm earlier in my career than the most senior bar here, but the work of shipping cross-functional learning programs and measuring whether they land is squarely what I do day-to-day. On the AI side, I use generative tools daily and have been building a RAG-based system that personalizes guidance from someone's own history—so I have a concrete, hands-on point of view on how AI changes the way people learn.

This is how I approach work, uniquely grounded in my background in organizational psychology: I use **data to diagnose** where people actually struggle, **stakeholder collaboration to design** cross-functional solutions, and **data again to track the metrics** that tell us whether it worked. As an analytical organizer with a growth mindset, I'm genuinely drawn to a team that treats enablement as a product to be measured and iterated—and I'd be excited to help Coinbase build it.

Sincerely,

Jamie Cheng

Jamie (Yi-Chieh) Cheng
