Dear Notion Hiring Team,

One line in this posting reads like my own working philosophy: take a messy people question and produce a clean narrative—**numbers to insights to a recommended decision**. That is genuinely how I think. With a master's in Applied Organizational Psychology, I treat people problems as **systems to be studied**: I diagnose with data before I design, and I build feedback loops so the answer keeps getting sharper. The chance to spend 18 months rotating across people operations, analytics, and total rewards—learning each by actually doing it—is exactly the kind of high-agency, build-from-the-inside environment I want to grow in.

The clearest version of this in my own work was at **NextGen Healthcare**, where I analyzed **2,000+ employee survey responses** to answer an open question: what actually drives engagement here? I owned the whole arc—pulling and cleaning the data, finding that **manager effectiveness** was the single biggest driver, and presenting the recommendation to the C-suite, who used it to reshape their leadership-training priorities. That is the "tell the story in data" loop the role describes, and it's the part of the work I love most.

I also know the **operations** side is real work with real ownership, and I've done it. In my current role as **Program Enablement Manager at InGenius Prep**, I run the unglamorous engine: managing 20+ programs and 10+ vendors, keeping program data clean, coordinating onboarding for 70+ cross-functional staff, and cutting onboarding time **75%** by surfacing where the process actually broke. On a pro-bono **OD consulting** engagement through Organization Development Network (ODN) Oregon, our team audited **300+ leave cases** and quantified **\$362K** in costs to refute a faulty assumption—messy data in, an audit-ready answer out.

A note on the two things you screen hardest for. On **AI**: I use it every day as a real multiplier, and I'm currently building a **RAG-based job-search system** with a developer friend that reads my own resumes, experience, and preferences to evaluate role fit—a project I genuinely couldn't have built alone a year ago. On **Notion**: I run my own work in it (databases, linked views, dashboards) and would be excited to become the People team's power user. I'll also be candid about a growth edge: my analytics has lived in Excel, Google Sheets, and SPSS rather than SQL, so SQL is the craft I'm most eager to build fast here—and "how fast you learn" is exactly the bet this program makes.

This is how I approach work, uniquely grounded in my background in organizational psychology: diagnose with data, collaborate cross-functionally on the fix, then track the metrics that prove it worked. As a curious, analytical builder, I'd be thrilled to bring that to Notion's People team. Thank you for your time and consideration.

Sincerely,

Jamie Cheng
