Dear Samsara Customer & Partner Education Team,

Great training isn't just about presenting well—from my experience, it's about diagnosing what an audience actually needs to know, designing a learning journey that meets them there, and reading the engagement data to keep improving what lands and fixing what doesn't. That's the work I love, and it's why this role on your Education team caught my attention as a Learning & Development professional with a master's in Applied Organizational Psychology and a track record of facilitating learning at scale.

In my current role as **Program Enablement Manager at InGenius Prep**, scaled delivery is my day-to-day. I **facilitate live training webinars for 600+ participants**, owning the full arc of session logistics—registration, Q&A facilitation, and follow-up resources—and I **develop and adapt training materials** as programs and audiences evolve. I also **conduct needs assessments with 25+ stakeholders** to find the real knowledge gaps, which keeps my programs structured around clear learning objectives rather than just activity. When I noticed adoption lagging on a new program, I went back, interviewed the people using it, found the blocker was friction rather than resistance, and rebuilt the experience around that insight—a reminder that **the data, not the assumption, should drive the design**.

Earlier, at **NextGen Healthcare**, I sharpened the analytical side of training. I **analyzed 2,000+ employee-experience responses** to identify what most affected outcomes, then translated those findings into reports leadership used to redirect their development priorities. I'm comfortable teaching myself a new product or tool quickly and figuring out what an audience most needs—and I use generative AI daily in my own work, including building a RAG-based system that personalizes learning from a person's own history.

I'll be candid that my training has been internal- and learner-facing rather than SaaS customer education, so the technical depth of Samsara's platform would be a fast ramp for me. But the core of the job—**making complex concepts clear, running engaging one-to-many sessions, and iterating from engagement data**—is exactly what I do.

This is how I approach work, grounded in my background in organizational psychology: I use **data to diagnose** where learners struggle, **collaboration with stakeholders to design** the right intervention, and **data again to track** whether it's working. As an analytical organizer with a growth mindset, I'm drawn to a team that's still shaping its future and gives its trainers room to master the craft—and I'd be glad to bring that mindset to Samsara.

Sincerely,

Jamie Cheng

Jamie (Yi-Chieh) Cheng
