Dear 4G Clinical Hiring Team,

A training program only earns its keep if it changes what people can actually do—not whether they attended. That belief is the through-line of my work, and it's what drew me to an L&D Specialist role defined by building role-based curriculums, managing a learning inventory, and measuring whether the content lands. With a master's in Applied Organizational Psychology, I treat learning design as research: find where the real capability gaps are, build the experience that closes them, then check the data to see if it worked. Doing that inside a high-growth, science-driven company like 4G Clinical—where curiosity and experimentation are part of the culture—is genuinely exciting to me.

This is the work I do now at **InGenius Prep**. I run needs assessments with 25+ stakeholders to surface learning gaps, design new programs around them, and facilitate live and virtual training for 600+ participants—then refine each program through feedback analysis. I also build the connective tissue around learning: guides, curriculums, and workflows for 70+ cross-functional staff that cut onboarding time by 75%, plus the day-to-day coordination of 20+ programs and 10+ vendors. Partnering across functions is central to how I work, which maps directly to aligning content with HR, Product, Delivery, and Customer Support the way this role describes.

A few of my strongest stories are exactly the kind of cross-functional, stakeholder-driven work the posting screens for. At **Vestas Wind Systems**, I piloted an Inclusive Leadership workshop for **12 senior leaders** and scaled it to **23 other locations**—by partnering with a subject-matter specialist and following up until it stuck, not by mandate. At **NextGen Healthcare**, I analyzed **2,000+ employee survey responses**, found manager effectiveness was the top engagement driver, and consulted with leaders on the training that followed. Building content with SMEs, tracking program effectiveness, and optimizing based on what the data shows are already core parts of my day.

I want to be candid about fit. The posting asks for five years across learning strategy, instructional design, and project management, and I'm earlier in my career than that—roughly three years—and my hands-on LMS work has been in Canvas and Moodle rather than the eLeap and EasyLlama platforms you run, which I'd come up to speed on quickly. What I bring instead is a strong, real foundation in this exact work: stakeholder-driven needs assessment, program design grounded in adult-learning science (the ADDIE-style assess-design-measure loop), facilitation across in-person and virtual formats, vendor and program management, and a genuine bias toward measuring impact. If that trade is one you're open to, I'd be glad to bring it to 4G Clinical. Thank you for your time and consideration.

Sincerely,

Jamie Cheng
