Dear Hiring Team,

I believe the best People work happens when good data meets real human attention — when you can read the numbers behind an employee's experience and still pick up the phone to help one person at a time. That belief is exactly why the **People Solutions Advisor I** role at **Nike** caught my eye: being the trusted first point of contact for HR services, working a case to resolution, and doing it across the US, Canada, and Mexico is the kind of work I genuinely love. I'm based right here in **Beaverton** and would be glad to be on-site with the team.

At **NextGen Healthcare**, I sat at the intersection of policy and people. I provided consultations to leaders on **HR policy, DEI, Inclusive Leadership, and performance review**, and I analyzed **2,000+ employee experiences** to surface what was actually driving satisfaction. That work taught me how to translate a written policy into a clear, fair answer for the person asking — which is the heart of advising employees well.

My current role at **InGenius Prep** is built on being the reliable point of contact. I serve as the go-to for **25+ stakeholders**, run the needs assessments behind three new programs, and document the guides and workflows **70+ staff** rely on — cutting onboarding time by **75%**. Earlier, as an HRBP assistant at **Vestas Wind Systems**, I supported employees and leaders across three global locations, fielding inquiries and clarifying HR processes — and at **Kronos Research**, my personalized, customer-service approach to talent grew applications by **566%** in two months. I'm comfortable holding a high case volume without losing the warmth each person deserves.

Most of all, I approach People work like the org psychologist I trained to be: form a hypothesis about what an employee or the system actually needs, gather the evidence, test the solution with real people, and refine from what I learn. It's a quietly scientific loop, and it's how I make sure the answer I give today makes the next answer better. I'd be thrilled to bring that mindset to Nike's team.

Warmly,

Jamie Cheng

Jamie (Yi-Chieh) Cheng
