Dear Hiring Team,

I believe learning sticks when it is designed around how people actually grow, not around the content we want to deliver. That conviction is what draws me to the Senior, Global Sales, Learning & Development role at **Nike** — a chance to build learning that reaches a global commercial audience and helps people do their best work. I'll be candid that I'm earlier in my career than the posting's 5-year mark, but the depth of L&D craft I've built in the last three years is real, and it is exactly the work this role describes.

At **InGenius Prep**, I own the full learning cycle. I facilitate training webinars for **600+ participants** — virtual delivery at scale — and the programs I designed sustain a **78% enrollment rate**. I develop the guides, workflows, and training content used by **70+ staff**, work that cut onboarding time by **75%**. Before any of that, I run needs assessments with 25+ stakeholders to find the real learning gaps, then design programs to close them — three new ones to date. That sequence, diagnose then design then deliver then measure, is how I approach every learning problem.

My instructional-design instinct is grounded in evidence, not guesswork. As an Organizational Development intern at **NextGen Healthcare**, I analyzed **2,000+ employee experiences** and delivered internal training on inclusive leadership and performance, across five cross-functional projects including L&D. At Vestas, I built and facilitated an Inclusive Leadership workshop for 12 senior leaders that was later scaled to 23 global locations — proof I can take a single well-designed session and make it travel across markets, which is the heart of global learning. My ODN Oregon consulting work then turned a **\$362K** leave-cost analysis into executive insights that drove new first-aid training.

I trained as an organizational psychologist — a master's at USC and a psychology-and-education background at Wesleyan — so I treat learning design like the scientific method: form a hypothesis about what people need, build the intervention, measure whether behavior actually changed, and iterate. I would love to bring that rigor, and a genuine love of helping people learn, to Nike's global sales teams.

Warmly,

Jamie Cheng

Jamie (Yi-Chieh) Cheng
