Dear Perforce Hiring Team,

Great learning programs aren't just about pushing content into a system—from my experience, they're about diagnosing where people actually struggle, building resources they'll genuinely use, and tracking whether the learning sticks. A Learning & Development Coordinator role that pairs **LMS administration and program logistics** with **AI-accelerated content creation** is exactly the kind of operational, builder-facing work I love. I'm an L&D and program-enablement professional with a master's in Applied Organizational Psychology, and coordinating training, documentation, and cross-functional program launches is the core of what I do day to day.

At **InGenius Prep**, I **facilitate training for 600+ participants** and run **needs assessments with 25+ stakeholders** to find learning gaps, which helped drive a **78% program enrollment rate**. A big part of that is exactly what this role calls for: I **build and maintain SOPs, learner guides, and a self-service knowledge base for 70+ cross-functional staff**, which cut onboarding time **by 75%**, and I **lead end-to-end program and project management across 20+ initiatives and 10+ vendors**—coordinating scheduling, logistics, and delivery across teams and time zones. I also **draft learning content and streamline manual processes with AI tools**, so working within an AI policy to accelerate content (and building a reusable prompt library) is a direction I'm already moving in and excited to go deeper on.

My earlier roles sharpened the cross-functional and data sides this role values. At **NextGen Healthcare**, I led a **manager-effectiveness initiative** and analyzed **2,000+ employee experiences**, turning the data into L&D and engagement recommendations for the C-suite—the same instinct behind tracking completion, satisfaction, and NPS to prove a program is working. At **Vestas Wind Systems**, I piloted an **Inclusive Leadership workshop** for senior leaders that later scaled to 23 global locations, and I optimized **onboarding across 3 global locations**—the kind of multi-region coordination across GTM, HRBP, and P&C partners this role lives in.

To be straight with you: I've administered learning platforms at the user level (Canvas, Moodle) and built and delivered the content and logistics around them, but I haven't yet been the hands-on admin for **Docebo** or **Showpad**, and I haven't authored **SCORM/xAPI** packages. Those are exactly the tools I'm eager to own—I pick up systems quickly (my supervisor calls me "the most organized person he's ever worked with"), and the L&D-coordination, content, and stakeholder work underneath them is already what I do. What ties it all together is how I work, grounded in organizational psychology (**MS, USC**): I diagnose with data before designing, partner cross-functionally to build the solution, and then track the metrics to see whether it actually landed. I'd be glad to bring that to Perforce's People & Culture team.

Warmly,

Jamie Cheng
