Dear American Indian College Fund Hiring Team,

I'm writing to apply for the Learning Experience Designer role. What first drew me in is the mission: an organization that has invested over \$237 million in Native scholars and partners with Tribal colleges so students can flourish on their own terms. As someone with a background in education and a master's in Applied Organizational Psychology, I care deeply about designing learning that meets people where they are, and the chance to do that in service of access for Native students is exactly the kind of work I want to grow into.

The heart of this role—starting from needs assessment, defining measurable learning objectives, and grounding curriculum in adult learning theory—is where my work lives day to day. At InGenius Prep, I run needs assessments with 25+ stakeholders to pinpoint learning gaps, then design educational programs around them; the materials I build reduced onboarding time by 75%, and the training I facilitate for 600+ participants drives a 78% conversion rate. Earlier, as an OD intern at NextGen Healthcare, I analyzed 2,000+ employee responses to shape leadership and L&D strategy, and through ODN Oregon I've upskilled an HR team to audit 300+ leave cases that surfaced \$362K in costs and drove evidence-based redesigns. My grounding in adult learning comes from both my USC organizational-psychology training and my Education Studies degree at Wesleyan.

I want to be straightforward about two things, because I'd rather you hear them from me. First, I have roughly three years of focused experience, just under your 4+ year mark. Second, my learning work has centered on needs assessment, curriculum and learning-material design, and facilitation rather than dedicated authoring in Articulate Rise and Storyline—I build content today in Canva and similar tools and design within LMS platforms, and I'd be ramping up on the specific authoring stack rather than arriving expert in it. What I can offer in exchange is a designer who already thinks in learning objectives and measurement, picks up tools quickly (I've increasingly built AI and automation into my own workflow), and would put together a portfolio of the program and learning-material work I've shipped so you can judge the craft directly.

I'd be genuinely glad to relocate to Denver for this and to work hybrid with your team. The College Fund's combination of a clear mission and a small, builder-oriented environment is where I do my best work, and I'd be honored to bring a rigorous, human-centered approach to designing learning that helps Native students succeed. I'd also note plainly that I would require visa sponsorship. Thank you for considering my application.

Warm regards,

Jamie Cheng
