Dear MaintainX Hiring Team,

The best educational programs aren't built in a vacuum—they grow out of **real relationships with the people who teach and learn**, and they improve through a continuous loop of feedback, iteration, and partnership. That's exactly how I've spent the last few years working, which is why the **Educational Program Manager** role drew me in: building partnerships with educators, creating curriculum-ready materials, and growing a program based on what instructors actually need is work I genuinely love.

At **InGenius Prep**—an education services company—I **manage and nurture global B2B partnerships**, work that grew our team's market share and drove its **highest revenue of \$316K**. I partner closely with **Sales, Ops, and 8+ vendors to launch and manage 15+ educational programs**, and I develop the **learning materials, product guides, and onboarding documents** that help both internal teams and external users adopt them confidently—reducing onboarding time by 75% for 70+ staff. This is the heart of what your role calls for: pairing **partnership development** with **curriculum-ready content** and **enablement**.

Just as important, I build programs from **evidence, not assumptions**. I run **needs assessments with 25+ stakeholders** and **facilitate training webinars for 600+ participants**, designing programs that fit how people actually learn—an approach grounded in my background in **education (BA in Psychology and Education Studies)** and **organizational psychology (MS, USC)**. Earlier, at **NextGen Healthcare**, I analyzed 2,000+ employee experiences and led a **manager-effectiveness initiative**, translating feedback into training and engagement strategies—so I'm comfortable empowering instructors to teach confidently and surfacing the success stories and impact metrics that show a program is working.

This is how I approach the work: I use **relationships and stakeholder collaboration** to understand what educators and partners need, I **build the materials and programs** that meet those needs, and I keep **using feedback and data** to make them better. I'd be genuinely excited to help schools, colleges, and vocational programs bring MaintainX into their classrooms—and to grow a program that prepares people for the maintenance and reliability careers your platform supports.

Warmly,

Jamie Cheng

Jamie (Yi-Chieh) Cheng
