Dear Linear Hiring Team,

Product support isn't just about answering tickets—from my experience, it's about understanding what users actually need, translating complex information clearly, and closing the loop between user feedback and the teams who can act on it. With a background in program management, stakeholder communication, and operations documentation, I want to be upfront: this role is a genuine stretch for me. I don't have a dedicated product support background. What I do have is a track record of making complex information accessible, managing high-volume communications, and systematically improving processes—and I believe those strengths are real contributors to a support function like Linear's.

At **InGenius Prep**, I served as a primary point of contact for **25+ global stakeholders**—answering inquiries, clarifying policies, and guiding teams through unfamiliar processes with patience and precision. I built **documentation and workflows for 70+ cross-functional staff** that reduced onboarding time by 75%, and facilitated **training sessions for 600+ participants**, translating complex program information into clear communication that drove a 78% enrollment rate. Managing a high-volume inbox, triaging requests by urgency, and keeping stakeholders informed under pressure were everyday requirements of that role.

At **NextGen Healthcare**, I analyzed **2,000+ employee feedback data points** to surface patterns that informed C-suite decisions, and contributed to 5 cross-functional improvement projects. Identifying patterns in large volumes of qualitative and quantitative data—then communicating findings clearly to decision-makers—is a skill I've built across multiple roles.

At **ODN Oregon**, I'm currently supporting an HR team through a process of diagnosing operational problems with data, proposing evidence-based solutions, and tracking outcomes. The diagnostic loop—observe, diagnose, propose, measure—is the same muscle product support requires, even if the domain is different.

My approach is grounded in my **MS in Applied Organizational Psychology (USC)**—which trained me to treat problems as systems: diagnose with data, collaborate on solutions, track metrics to ensure progress. As an **analytical organizer with a growth mindset**, Linear's reputation for thoughtful, high-quality product execution and the opportunity to be on the front line of user feedback are genuinely exciting to me. I'm applying honestly, knowing this is a stretch—and I'd welcome the chance to show what that transferable foundation looks like in practice.

Sincerely,

Jamie Cheng
