Dear Replit Hiring Team,

Recruiting program management isn't just about filling seats—from my experience, it's about building the infrastructure that helps an organization attract, develop, and retain talent through data-informed decisions and deep cross-functional collaboration. With a background spanning talent sourcing, program design, and stakeholder coordination, I'm excited to bring that same combination of operational precision and people-first mindset to Replit as an Emerging Talent Recruiting Program Manager.

At **Kronos Research**, I owned the full recruiting cycle for a challenging international talent market—drafting job descriptions, sourcing candidates, and building personalized outreach that increased applications by **566% in just two months**. I organized campus recruiting events and moderated C-suite panels at top universities, reaching 230+ students and generating 80+ qualified applicants. That experience gave me a clear appreciation for how great programs turn passive interest into active pipelines.

At **InGenius Prep**, I managed **20+ programs and 10+ vendor partnerships** simultaneously, coordinating delivery strategy and conducting **needs assessments with 25+ global stakeholders** to continuously refine what we offered. I built onboarding documentation and workflows for **70+ cross-functional staff** that reduced ramp time by 75%, and facilitated **training sessions for 600+ participants**—achieving a 78% client conversion rate. Managing a high-volume operational inbox, triaging requests, and keeping diverse stakeholders aligned on program expectations were the daily rhythm of that role.

At **NextGen Healthcare**, I analyzed **2,000+ employee experience data points** to surface C-suite insights on engagement and satisfaction drivers, and contributed to 5 cross-functional projects spanning survey development, rewards & recognition, and L&D. Connecting data to program decisions—and translating findings into clear recommendations—is a skill I bring to every team I join.

My approach is grounded in my **MS in Applied Organizational Psychology (USC)**—which shaped how I think about talent and program challenges as systems: I diagnose with data, propose solutions through cross-functional collaboration, and track key metrics to ensure real progress. As an **analytical organizer with a growth mindset**, Replit's mission to make software creation accessible to everyone and the opportunity to build emerging talent programs that bring diverse voices into the builder community are both draws I'd love to pursue with your team.

Sincerely,

Jamie Cheng
