Dear 80,000 Hours Hiring Team,

People Operations isn't just about keeping systems ticking—from my experience, it's about building the infrastructure that lets employees trust the organization, through a continuous cycle of collecting insights, analyzing data, and refining solutions through cross-functional collaboration. With a background spanning HR consulting, program operations, and global people programs, I'm excited to bring that same blend of analytical rigor and people-first mindset to 80,000 Hours as a People Operations Associate.

At **Vestas Wind Systems**, I worked alongside a global HRBP team on high-stakes people priorities: piloting an **Inclusive Leadership workshop** for senior leaders that later scaled to 23 global locations, overseeing cross-functional stakeholders through a Mergers & Acquisitions integration, and optimizing onboarding processes across three international sites. That work grounded me in how operational HR infrastructure directly shapes whether people feel supported from day one—and sharpened my ability to coordinate across teams without losing sight of the human experience underneath each process.

At **InGenius Prep**, I managed the full operational lifecycle for **20+ programs and vendor partnerships** simultaneously—establishing cross-functional workflows for 70+ staff (reducing onboarding time by 75%), facilitating listening sessions with 25+ global stakeholders to continuously improve what we offered, and running training webinars for **600+ participants** while maintaining a 78% program enrollment rate. That role taught me that great People Ops requires both rigorous systems and genuine curiosity about what employees actually need—and that the two reinforce each other when you build feedback loops into daily work.

At **Organization Development Network (ODN) Oregon**, I supported an HR team in diagnosing a \$362K leave cost problem through data analysis—upskilling the team to audit 300+ cases, refute cost assumptions, and present executive-ready insights that led to real policy redesigns. Working at that diagnostic layer of HR gave me a clear sense of how data-driven operations can shift conversations from assumptions to evidence, and how much that matters for organizations trying to do right by their people.

My approach is grounded in my **MS in Applied Organizational Psychology (USC)**—which shaped how I think about people problems as systems: I diagnose with data, collaborate cross-functionally on solutions, and track metrics to ensure real progress. As an **analytical organizer with a growth mindset**, 80,000 Hours' mission to help people find high-impact careers and the opportunity to build the people operations that support that mission are both draws. I'd love to bring this methodology to your team.

Sincerely,

Jamie Cheng

Jamie (Yi-Chieh) Cheng
