Dear Fred Hutch Hiring Team,

HR Operations isn't just about keeping processes running—from my experience, it's about building the systems and workflows that let employees and managers focus on the work that matters most, through a continuous cycle of data analysis, process refinement, and cross-functional collaboration. With a background spanning HRBP support, HR consulting, and operational program management, I'm excited to bring that combination of analytical rigor and people-first mindset to Fred Hutch Cancer Center as an HR Operations Specialist.

At **Vestas Wind Systems**, I worked embedded with a global HRBP team on a wide range of people operations: optimizing **onboarding processes across 3 international locations** through gap analysis and process redesign, delivering strategic HR support across projects in employee relations, headcount planning, and succession planning, and assisting in employee relations cases with careful attention to labor law compliance and confidentiality. Supporting complex HR workflows in a highly matrixed multinational environment taught me both the operational discipline and the cross-functional communication skills that HR Operations demands.

At **InGenius Prep**, I managed the full operational lifecycle for **20+ programs** simultaneously—establishing cross-functional processes and documentation for 70+ staff (reducing onboarding time by 75%), utilizing data-driven feedback loops to optimize vendor performance and program delivery, and facilitating stakeholder listening sessions with 25+ global participants to continuously improve what we offered. Building HR-adjacent infrastructure that scales, keeping multiple operational tracks running in parallel, and using data to drive process decisions were the daily practice.

At **Organization Development Network (ODN) Oregon**, I supported an HR team in diagnosing a \$362K leave cost problem through structured data analysis—auditing 300+ cases, refuting cost assumptions with evidence-based insights, and enabling the team to present executive-ready recommendations that led to real policy redesigns. That diagnostic HR consulting work sharpened my ability to translate operational data into strategic direction for people teams.

My approach is grounded in my **MS in Applied Organizational Psychology (USC)**—which shaped how I think about HR problems as systems: diagnose with data, collaborate cross-functionally on solutions, and track metrics to ensure real progress. As an **analytical organizer with a growth mindset**, Fred Hutch's mission to eliminate cancer as a cause of human suffering and the opportunity to support the people operations behind that critical work are both genuine draws. I'd love to bring this methodology to your team.

Sincerely,

Jamie Cheng

Jamie (Yi-Chieh) Cheng
