Dear Hiring Team,

I believe the best decisions in any health system come from listening closely to the people inside it and then letting the **data** tell the real story. That conviction is what draws me to the **Health System Transformation Research Project Coordinator** role at OHSU—a chance to help coordinate research and improvement work that reaches providers, payers, and communities across Oregon, the state I now call home.

My most relevant grounding comes from **NextGen Healthcare**, where I worked inside a healthcare organization to turn employee and stakeholder feedback into action. I analyzed more than **2,000 employee experiences** to surface satisfaction drivers, translated that data into reports that guided C-suite decisions, and ran five cross-functional projects spanning survey development and program design. It taught me how to move a healthcare initiative from raw data to a decision people actually trust.

At **ODN Oregon**, I do the kind of mixed-method diagnostic work this role lives on. On one project I helped an HR team audit **300+ leave cases**, refuting cost assumptions with **evidence-based analysis** and surfacing **\$362K** in leave costs that reshaped policy. On another, I conduct focus groups and interviews with an NGO leadership team and analyze the **qualitative data** to pinpoint decision-making and accountability gaps. Quantitative and qualitative, side by side—which is exactly what coordinating transformation research demands.

Coordinating the moving parts is second nature from **InGenius Prep**, where I manage end-to-end timelines, deliverables, and **25+ stakeholders** across 20+ programs, and build the guides and workflows that keep cross-functional teams aligned. I'm comfortable owning the schedule, the documentation, and the relationships that keep a complex project on track.

My training in organizational psychology taught me to work like a scientist: **diagnose with data**, **collaborate with the people closest to the problem**, and **track the metrics** that prove whether change actually took hold. That's the approach I'd bring to ORPRN's transformation work, and I'd be glad to contribute it to OHSU's mission of improving health for all Oregonians.

Warmly,

Jamie Cheng
