Dear Hiring Team,

I believe learning sticks when it's designed for the people doing the work—built on adult learning principles, shaped by the experts closest to the content, and tested against real feedback. That belief is exactly why the Senior Learning Specialist role on Oscar's Decentralized Learning team caught my eye: authoring instructor-led and eLearning content, facilitating courses for both in-person and remote learners, and partnering with subject matter experts is the kind of L&D craft I genuinely enjoy—and doing it inside health insurance, where clarity directly affects how well people are served, makes it matter even more.

At InGenius Prep, I run needs assessments with 25+ global stakeholders to identify learning gaps and design new educational programs, and I facilitate training webinars for 600+ participants to deepen program understanding. I've developed training guides and workflows for 70+ cross-functional staff that cut onboarding time by 75%, and I manage 20+ programs and 10+ vendors—refining delivery strategy and operations through structured feedback. Designing for that many learners across disciplines and locations has taught me how to keep content accurate, engaging, and consistent as it scales.

Healthcare is also where I first learned to build training for a complex, regulated environment. At NextGen Healthcare, I led a manager-effectiveness initiative and analyzed 2,000+ employee experiences, turning feedback into reports leaders could act on—including consultations on internal training across DEI, Inclusive Leadership, and performance review. At Vestas, I optimized onboarding across three locations and piloted an Inclusive Leadership workshop that grew from 12 senior leaders to 23 global sites. That blend of building content with experts and measuring whether it actually worked is close to what this role asks for.

I approach learning the way I'd approach any experiment: form a clear hypothesis, gather the evidence, test it with the people closest to the problem, and let the results shape what comes next. I'd love to bring that scientific, human-centered approach to the learning programs that help Oscar's teams—and the members they serve—do their best work.

Warmly,

Jamie Cheng

Jamie (Yi-Chieh) Cheng
