Dear Hiring Team,

I believe learning works best when it's built like a program—with clear learning paths, real data behind every decision, and the people closest to the work shaping what gets taught. That belief is exactly why the Learning & Development Coordinator role at UST caught my eye: administering the learning platforms, building courses and certifications, and keeping the logistics of training running smoothly is the kind of L&D craft I genuinely enjoy.

At InGenius Prep, I currently run needs assessments with 25+ global stakeholders to identify learning gaps and design new educational programs, and I facilitate training webinars for 600+ participants to deepen program understanding. I've developed learning guides and workflows for 70+ cross-functional staff that cut onboarding time by 75%, and I manage 20+ programs and 10+ vendors—refining delivery strategy and operations through structured feedback. Coordinating that many learners, vendors, and timelines has taught me how to make a learning experience feel seamless from enrollment through completion.

I also like to let the data lead. At NextGen Healthcare, I led a manager-effectiveness initiative and analyzed 2,000+ employee experiences, turning feedback into reports leaders could act on—including work on internal training across DEI, Inclusive Leadership, and performance review. At Vestas, I optimized onboarding across three locations and piloted an Inclusive Leadership workshop that grew from 12 senior leaders to 23 global sites. That mix of program building and measurement is close to what this role asks for.

I approach learning the way I'd approach any experiment: form a clear hypothesis, gather the evidence, test it with the people closest to the problem, and let the results shape what comes next. I'd love to bring that scientific, human-centered approach to the learning programs that help UST's people grow.

Warmly,

Jamie Cheng
