Dear Thyme Care Team,

Cancer touches almost every family, and what Thyme Care is building—a model that makes care more connected and less confusing precisely when people are most overwhelmed—genuinely moves me. During my time at NextGen Healthcare, I saw firsthand how fragmented operational processes inside a health-tech organization can ripple outward and erode the experience patients and their teams actually feel. That proximity to healthcare operations, combined with my background in data analysis and people-program management, is what drew me to this role.

The work I know best sits at the intersection of analytical rigor and operational translation. At ODN Oregon, I dug into 300+ leave cases to surface a \$362K cost picture that leadership hadn't quantified before—and then turned that into a policy recommendation they could act on. At NextGen Healthcare, I analyzed 2,000+ employee experience responses and built the reporting that the C-suite used to prioritize their engagement and L&D investments. Neither project started with a clean dashboard; both started with messy data and a stakeholder who needed clarity. I am most at home in that setup: raw data, a meaningful question, and the challenge of building the report or model that answers it honestly.

At InGenius Prep, I've managed 20+ concurrent programs across 10+ vendors while simultaneously standardizing processes and building documentation systems that reduced onboarding time by 75%. The cross-functional coordination piece—holding schedules, surfacing coverage risks, translating operational data into plans leadership can act on—is work I do every day. I recognize that your role asks for that same connector function between frontline care teams and leadership, and I believe my operational discipline translates directly, even as I'd be growing into formal workforce-management tooling like Verint or Calabrio that I haven't used yet.

I want to be honest about that gap: I don't have hands-on experience with dedicated WFM platforms or CCaaS systems, and I've never managed staffing forecasts in a contact-center environment specifically. What I bring is a strong analytical foundation in Google Sheets and Excel (including time-based and scenario modeling), a research-trained instinct for working carefully with small data sets where errors have real consequences, and a genuine belief in Thyme Care's mission. I am the kind of person who builds toward mastery quickly when the work matters—and this work clearly matters.

I would love the opportunity to speak with your team about how my background in data analysis, program operations, and cross-functional stakeholder facilitation might serve the Care Delivery team as it scales.

Warm regards,

Jamie Cheng
