Dear DraftKings Talent Management Team,

Good talent programs don't come from a template—they come from diagnosing what people actually need, designing something that fits, and then watching the data to see whether it stuck. That's the lens I'd bring to this role as an Organizational Development and Program Management professional with a master's in Applied Organizational Psychology, and it's why a Talent Management seat at a fast-moving company like DraftKings genuinely excites me.

At **NextGen Healthcare**, I worked the diagnostic side of talent. I **analyzed 2,000+ employee-experience responses** to find what was really moving engagement, concluded that **manager effectiveness was the strongest lever**, and turned that into a report the C-suite used to reshape its leadership-development priorities. That experience taught me how performance and talent data, read honestly, can redirect where an organization invests in its people.

In my current role as **Program Enablement Manager at InGenius Prep**, I run that full cycle at program scale. I **manage 20+ programs and 10+ vendors, conduct needs assessments with 25+ stakeholders** to design new development programs, and **facilitate training for 600+ participants**—partnering across Marketing, Tech, and Sales to refine delivery and **cut onboarding time by 75%** through better documentation and communication. Coordinating that many moving parts across functions is exactly the operational backbone a talent-program role lives on.

I'll be candid that my ~3 years sit below the five the posting describes, so I'm not going to overstate my tenure. What I can point to is real range: leading a Mergers & Acquisitions workstream and piloting an Inclusive Leadership workshop at **Vestas** (12 senior leaders, later scaled to 23 locations), and using analytics to challenge a \$362K cost assumption in my current OD consulting work. I'm also hands-on with AI tools day-to-day, so the "AI-enabled HR tech" direction reads as energizing rather than intimidating.

This is how I approach the work, grounded in organizational psychology: **data to diagnose** where people struggle, **stakeholder collaboration to design** the program, and **data again to measure** whether it landed. I'd love the chance to bring that to the team building DraftKings' talent programs.

Sincerely,

Jamie Cheng

Jamie (Yi-Chieh) Cheng
