Dear Oregon State University Hiring Team,

I'm applying for the Academic Advisor/Coordinator role in Integrative Biology because it brings together the two things I care most about in my work: supporting students one relationship at a time, and coordinating the programs and communications that make a department feel navigable. My academic foundation is in this space—a BA in Psychology and Education Studies from Wesleyan, including a Practicum in Education Studies and coursework in Educational Psychology and student development, and a master's in Applied Organizational Psychology. Helping students from many backgrounds make confident decisions about coursework and careers, while keeping the behind-the-scenes coordination running smoothly, is exactly the kind of work I want to grow in.

Both halves of this role map to what I do now at InGenius Prep. On the advising side, I support 600+ students and program participants through workshops and one-on-one connection, guiding decisions and connecting goals to next steps. On the coordination side, I run 20+ programs end-to-end: I manage communication schedules and outreach, maintain advising materials and sample plans, and design engagement for online learners—which feels especially relevant given Integrative Biology's large Ecampus Zoology program. I'm comfortable with the systems-and-records part of advising, and I build rapport easily across cultures and backgrounds, having worked in offices spanning the U.S., Taiwan, and Denmark.

I want to be candid about fit. My experience supporting and coordinating for learners has come through educational programs and consulting rather than a higher-education advising office, so OSU's advising systems—and the life-sciences content of the Biology and Zoology majors—would be areas I'd ramp up on, partnering closely with the IB advising team and faculty. What I bring is a strong, relevant foundation: an education-and-psychology background, real student-facing advising and program-coordination experience, a genuine commitment to inclusive, proactive advising, and a track record of learning new systems and subject areas quickly. I'd be glad to bring that to Integrative Biology. Thank you for your time and consideration.

Sincerely,

Jamie Cheng

Jamie (Yi-Chieh) Cheng
