Dear Premera Hiring Team,

A development program only works if it changes what people actually do—not whether they showed up. That belief is the through-line of my work, and it's what drew me to a Skills Building role that starts with AI Learning Pathways and is measured by the capabilities it builds. With a master's in Applied Organizational Psychology, I treat learning design as research: assess where the real skill gaps are, build the experience that closes them into the flow of work, then measure whether it landed. The chance to do that for an organization built around making healthcare work better is genuinely exciting to me.

This is the work I do now at **InGenius Prep**, where I run needs assessments with 25+ stakeholders to find learning gaps, design new programs around them, and facilitate live virtual sessions for 600+ participants. I pair that with the adult-learning principles from my graduate training—people learn by doing and revisiting, not by sitting through a single session—so I build in practice and follow-up rather than one-and-done events. AI is part of how I already work: I use it daily and am building a **RAG-based job-search system** with a developer friend, and I'm convinced its real unlock for L&D isn't replacing facilitators but finally delivering personalized, in-the-moment learning at scale. That's the lens I'd bring to AI Learning Pathways.

Two of my strongest stories are leader-facing by design. At **Vestas Wind Systems**, I piloted an Inclusive Leadership workshop for **12 senior leaders** and scaled it to **23 other locations**—not by mandate but by building belief, partnering with a subject-matter specialist, and following up until it stuck. At **NextGen Healthcare**, I analyzed **2,000+ employee survey responses**, found manager effectiveness was the top driver of engagement, and consulted with leaders on the training and strategic plans that followed. I care most about the part Premera screens for: developing impact measures that show the gains a learning experience actually delivered, not just attendance.

I want to be candid about fit, because I'd rather be straight with you. The posting asks for seven years in L&D with five developing programs for leaders, and I'm earlier in my career than that—my leadership-facing work has been as an enablement manager and HRBP partner rather than owning a leadership-development portfolio at scale, and I haven't managed a team directly. What I bring instead is a strong foundation in exactly this work—stakeholder-driven needs assessment, facilitation across virtual and hybrid settings, program design grounded in adult-learning science, and a real bias toward measuring impact—plus the kind of curiosity and collaborative, relationship-focused approach the role describes. If that trade is one you're open to, I'd be glad to bring it to Premera's talent team. Thank you for your time and consideration.

Sincerely,

Jamie Cheng
