Dear Trimble Customer Success Team,

Enablement, to me, is really two jobs working together: building programs that get people productive faster, and building the content and knowledge they reach for once they're in the work. This role asks for both, and that combination is exactly what I do today as an Organizational Development and Program Management professional with a master's in Applied Organizational Psychology.

In my current role as **Program Enablement Manager at InGenius Prep**, I design and run onboarding programs and live training for **600+ participants**, and I build the materials behind them—**guides, workflows, and help documentation for 70+ cross-functional staff** that **cut onboarding time by 75%**. I also **manage 20+ programs and 10+ vendors**, conducting needs assessments with **25+ stakeholders** to decide what to build and using feedback and effectiveness metrics to refine what's already live. That's the day-to-day rhythm of an enablement program: diagnose the gap, build the program and the content, measure whether it landed.

The measurement piece is something I care about. At **NextGen Healthcare**, I **analyzed 2,000+ employee-experience responses** to pinpoint what actually moved outcomes and translated it into a report the C-suite used to reset priorities. I'd bring that same instinct to evaluating the ROI of enablement here—treating a knowledge base or an onboarding track as something to be measured and iterated, not just shipped. I'm also hands-on with AI tools daily, so partnering with an AI Program Manager on self-service effectiveness is a direction I'm genuinely curious about.

I want to be straight about fit: my enablement experience has been with internal staff and HR-side learning rather than sales or SaaS customer enablement, and I'm at roughly three years against the three-to-five the posting describes. So the specific domain would be a learning curve. What carries over cleanly is the core of the role—standing up programs, building a content and knowledge library, and reading the data to improve both—which is squarely where I've spent my time.

I approach this work by **diagnosing with data, designing with stakeholders**, and **measuring to refine**, and I'd be glad to bring that to Trimble's enablement team. Thank you for considering my application.

Sincerely,

Jamie Cheng

Jamie (Yi-Chieh) Cheng
