Dear Autodesk Hiring Team,

When I read this role, what stood out was the lens: shaping how organizations operate, grow, and transform by treating them as systems to be diagnosed, designed, and improved. That is exactly how my graduate training in Applied Organizational Psychology (MS, USC) taught me to think—connect strategy to structure, work, and people, then test whether the design actually holds. I'll be candid up front: I am earlier in my career than the 6-8+ year mark this role describes, so I'm applying as a genuine stretch. What I can offer is real, hands-on organization-effectiveness work and a systems mindset I'd be eager to grow into a senior consulting seat at Autodesk.

The closest match to this work is my current consulting with **ODN Oregon**. With one client, I run **focus groups and 1:1 interviews with an NGO leadership team to diagnose decision-making and accountability gaps**, then bring the team back the uncomfortable findings and challenge them to redesign how decisions get made and owned—the kind of "clarify priorities, align leadership teams, strengthen decision-making and accountability structures" partnering this role calls for. With another, I **facilitated CEO and HR discovery interviews to diagnose absenteeism drivers**, then analyzed **300+ leave cases** to surface **\$362K in costs** that reframed the conversation and drove policy redesigns. Diagnose before designing, ask before assuming—that's how I work.

That approach runs through the rest of my background. At **NextGen Healthcare**, I analyzed **2,000+ employee experiences** to identify what actually moved engagement and guided C-suite decisions on where to focus. At **Vestas Wind Systems**, I supported a **Mergers & Acquisitions** project—coordinating cross-functional stakeholders through structural transition—and ran an Inclusive Leadership pilot that scaled to **23 global locations**. And at **InGenius Prep**, I partner across functions to run **needs assessments with 25+ stakeholders**, translate the findings into operating-model and ways-of-working improvements, and clarify roles for **70+ staff**, cutting onboarding time **by 75%**.

What ties it together is how I operate in ambiguity: structure the problem, gather evidence, build trusted relationships across levels, and measure whether the solution sticks. I'm genuinely drawn to Autodesk's Organization Effectiveness team—including the work on how roles and teams evolve as humans and AI work more closely together—and I'd welcome the chance to contribute and keep growing as a consultant here.

Warmly,

*Jamie Cheng*
