Dear Chainalysis Hiring Team,

A People Operations team that treats employee experience as a system to design—reliable data, intuitive processes, and AI to eliminate the manual work—is exactly the environment I want to build in. I'm a People Operations and programs professional with a master's in Applied Organizational Psychology, and the lifecycle-program ownership, documentation, and process-redesign this role describes is the core of what I do day to day. To be upfront: my ~3 years sits just under the 4-6 year range, so I'm applying as a slight stretch—but the work itself maps closely.

At **InGenius Prep**, I **lead end-to-end program and project management across 20+ concurrent initiatives**, multiple stakeholders, and **10+ vendors**, keeping delivery on track and on quality. A big part of that is exactly what this role calls for: I **build and maintain SOPs, guides, and a self-service knowledge base for 70+ cross-functional staff**, which cut onboarding time **by 75%**, and I **redesign manual processes**—increasingly with **AI tools**—to find inefficiencies and implement scalable fixes. Owning programs from concept through execution and documenting them so people can self-serve is genuinely where I'm strongest.

The rest of my background sharpens the operational and data sides. At **Vestas Wind Systems**, I optimized **onboarding across 3 global locations** by analyzing the workflow against the global standard and standardizing the touchpoints, and I supported a Mergers & Acquisitions project through structural change. At **NextGen Healthcare**, I analyzed **2,000+ employee experiences** and turned the data into recommendations for the C-suite—the same instinct behind tracking metrics like eNPS and time-to-productivity to drive improvements. And in my current **ODN Oregon** consulting, I diagnose hard, ambiguous problems through interviews and data before recommending changes.

What ties it together is how I work, grounded in organizational psychology (**MS, USC**): diagnose before designing, build cross-functional partnerships (I've worked closely with Sales, Tech, and external vendors), and measure whether a change actually stuck. I'm genuinely drawn to a People team building a scalable, data-driven employee experience with automation and AI at its center, and I'd welcome the chance to contribute to Chainalysis.

Warmly,

Jamie Cheng

Jamie (Yi-Chieh) Cheng
