Dear Gainsight Hiring Team,

This role reads like the intersection I've been working toward: running complex, cross-functional people programs while actively bringing AI into how HR work gets done. I'm a People programs and project manager with a master's in Applied Organizational Psychology, and I'll be candid—my ~3 years sits below the 6-10+ year program-management mark you've set, so I'm applying as a stretch. What I bring is genuine cross-functional program leadership, a researcher's instinct for process improvement, and real, current experience folding AI into people work.

The program side is the core of what I do today. At **InGenius Prep**, I **lead 20+ cross-functional initiatives end-to-end** with **10+ vendors** across Marketing, Tech, and Sales—owning plans, timelines, and delivery, and keeping stakeholders aligned. I run **needs assessments with 25+ stakeholders**, **standardize processes** and build guides for **70+ staff** that cut onboarding time **by 75%**, and facilitate working sessions and training for **600+ participants**. It's exactly the planning-through-execution, document-and-standardize, influence-without-authority work this role describes—just at an earlier-career scale.

On the AI side, this isn't theoretical for me. I use AI tools daily to speed up needs assessments and analysis, and—true story—I've been building a RAG-based system with a friend that evaluates job fit against my own resumes and experience. So when I read "assess HR workflows for automation, research emerging AI tools, support adoption, and build AI literacy," I see work I'm already curious about and practicing. I'd partner with HR teams to map current- and future-state processes and measure adoption, not just ship a tool.

What ties it together is how I work, grounded in organizational psychology (**MS, USC**): diagnose with data before designing, build cross-functional partnerships to make change stick, and measure whether it actually improved the experience. I thrive in ambiguous, matrixed environments—my consulting work is ambiguous by design. Gainsight's Human-First mission and the chance to help an HR org get more effective and AI-fluent genuinely excite me, and I'd welcome the conversation.

Warmly,

Jamie Cheng

Jamie (Yi-Chieh) Cheng
